

INTRODUCING

XXLite™

LARGE-FORMAT INDOOR BACKLIT DISPLAYS

XXLite™ IS THE ONLY LARGE-FORMAT BACKLIT DISPLAY FIXTURE DESIGNED EXCLUSIVELY FOR INDOOR USE.

Finally, there is a user-friendly solution to the steadily-rising demand to display large indoor backlit graphic media. Available in sizes as large as 10' (3m) by almost any dimension, **XXLite™** provides the user with a highly-simplified method of graphic installation and changes (detailed below photos).

Superb styling aesthetics and Clarr's renowned industry-leading illumination qualities combine with its exceptional ease of use to make **XXLite™** the natural choice for retail, showroom, airport, tradeshow, sports venue, and many other types of display environments.

XXLite™ may be ordered with its standard satin-anodized aluminum finish, or in a variety of colors. Each unit is separated into sections for convenience of shipment, and on-site assembly is quick and easy.

How it works: The graphic print has a Velcro® strip permanently attached to the reverse side of its perimeter. The graphic is first affixed to the **XXLite™** structure by mating its strip with the corresponding Velcro® strip permanently mounted inside the perimeter of the structure (1). Then the spring-loaded frame profile sections are closed, adding tension and security to the graphic (2). In the third and final step, a special key* is inserted into a series of keyholes and rotated (3 & 4), providing additional tensioning and security.

With this innovative system, graphic changes can be accomplished in minutes by one person, with no special skills required. There are no plastic sheets to handle, break or scratch, and there is no complicated fastening of loops and strings.

US and foreign patents pending.

*Two are provided as standard equipment.
