

Now you can . . .

Take your Images To The Edge With our New Frameless Displays

Our wide selection of frameless graphic displays takes your images "to the edge", eliminating the conventional "framed in" look. Images are printed using environmentally-friendly fabrics

and inks, and are retained by a simple, invisible and easy-to-use perimeter tensioning feature. Also eliminated in the process are acrylic faces, along

with their weight, reflections, and cost. The result—your graphics have greatly-enhanced visual impact, using a simple, economical, and eco-friendly system.

STRETCHFRAME™ and **STRETCHLITE™** are available in all popular sizes, custom sizes, and in "mega" sizes. They can be made virtually any size, but the practical size limit is 10' (3m)* by any dimension. Sizes larger than 36" x 48" (915 x 1220 mm) are shipped in kit form, and are easily assembled on location.

*This is the maximum width of most rolls of compatible graphic material.
